

Software Engineer leading the architecture and technical direction that platforms serving thousands of developers are built on. Define the systems and standards teams rely on — internal developer portals, design systems, reusable component libraries — with deep ownership of performance, accessibility (WCAG), and client-side security. Currently architecting AI-assisted document intelligence on OCR pipelines and RAG, turning weeks-long workflows into minutes.

Frontend: React, TypeScript, JavaScript (ES6+), HTML5, CSS3, Tailwind CSS, Material UI (MUI), Angular, AngularJS, Vue.js, React Native, Sass, Less, D3.js, Three.js, Chart.js, Bootstrap, Foundation, Strapi CMS.

Backend: Node.js, Express.js, REST APIs, GraphQL, PHP, Java, MySQL, MongoDB.

Testing & Quality: Jest, Cypress, Playwright, Jasmine, ESLint, Istanbul, Unit Testing, End-to-End Testing.

Cloud & DevOps: AWS, Azure, Docker, Kubernetes, CI/CD, Jenkins, GitLab CI, Webpack, Babel, Yarn, NPM, Gulp, Grunt.

Accessibility: WCAG, ARIA, all best practices.

Version Control & Tools: Git, GitHub, GitLab, SVN, Unix/Linux, Tomcat.

Data & Emerging Technologies: Python, Data Analysis, OCR Pipelines, Retrieval-Augmented Generation (RAG)

Software Engineer Lead II | UST | Nov 2024 - present

- Leading platform-wide initiatives to modernize and scale T-Mobile's internal cloud provisioning and account management experiences, with a strong focus on frontend architecture, developer experience, and usability.
- Built and led frontend architecture for T-Cloud, T-Mobile's private cloud platform on OpenShift, enabling scalable, self-service containerized deployments and significantly improving developer productivity.
- Played a key role in building T-Mobile's next-generation Internal Developer Portal (IDP), a unified frontend control plane providing one-click access to infrastructure, services, CI/CD workflows, observability, and governance through golden-path automation, reducing developer time spent on repetitive infrastructure tasks by 20–40%, cutting onboarding time by 30–70%, and reducing service creation time from weeks to minutes.
- Led the integration and customization of Strapi CMS, replacing Adobe Experience Manager for document and blog management, streamlining content workflows and resulting in \$100K+ annual savings in licensing and support costs.
- Designed and implemented an AI-powered document intelligence platform using OCR pipelines and Retrieval-Augmented Generation (RAG), enabling natural language querying and semantic search over enterprise documents, reducing document retrieval time by 85%, improving information accuracy by 40%, and increasing team productivity by 25%.
- Integrated Novu with T-Mobile's SMTP infrastructure to deliver real-time, multi-channel notifications for internal platforms, eliminating third-party email delivery services and saving \$5K–\$10K+ annually.

Consultant Software Engineer Lead | HPE | Nov 2023 - Nov 2024

Led development of frontend-driven data visualization platforms for DevOps operations and service health, delivering interactive dashboards, heat maps, and visual analytics across thousands of datasets and improving operational data visibility by ~20%. Designed graph-based visualizations and service mapping systems to model service dependencies and backlog relationships, contributing to a ~3% reduction in operational backlogs and improving infrastructure service detection and observability by ~20%. Built alerting and visualization tools for IT Operations, enabling proactive detection of infrastructure and service issues and accelerating operational decision-making.

Staff Software Development Engineer | Fortinet Inc | Jul 2019 - Oct 2023

- Led migration of legacy frontend systems to modern, scalable architectures, improving maintainability, performance, and long-term extensibility. Built security-focused web applications, dashboards, and network visualizations for global cyber-threat analysis, enabling proactive detection for enterprise customers.
- Improved proactive threat detection by ~15% through automation, reducing manual intervention by ~25%.

Software Engineer I - II | Equilar Inc | Aug 2015 - Aug 2019

Built tools enabling executives and board members to signal board interest and supported a Predictive Diversity Network to identify prospective board candidates. Developed frontend platforms with network and relationship graphs connecting executives, law firms, and board members, surfacing multi-degree connections and supporting board discovery workflows. Created shared frontend tooling and design systems, including custom linting, code coverage tools, and reusable Node.js packages, reducing manual code review effort by ~20%.

Professional Intern | Walt Disney World | Jan 2014 - Aug 2014

- Developed operations and logistics tracking software for Walt Disney merchandising division.

Education: MS in Computer Science [Graduate Scholarship recipient] Texas A&M University
