

Dear Hiring Manager,

I am writing to express my interest in the Staff Frontend Engineer role. With over ten years of experience building scalable, high-impact user-facing web applications, I bring deep expertise in React, TypeScript, and modern frontend architecture, along with a strong track record of leading frontend platforms and design systems.

In my current role, I lead frontend architecture initiatives focused on developer experience and platform usability, contributing to large-scale internal systems that support cloud provisioning, self-service workflows, and internal developer tooling. I have built and evolved reusable component libraries, driven frontend standards, and partnered closely with product, design, and platform teams to deliver performant, accessible, and secure user experiences.

Alongside my frontend specialization, I have recently worked on applied AI-driven systems, including OCR-based document processing and Retrieval-Augmented Generation (RAG) architectures. These efforts enabled natural language querying and semantic search over large document repositories, significantly reducing information retrieval time and improving productivity. I view this work as a natural extension of frontend engineering—designing intuitive, reliable interfaces on top of complex systems.

I am motivated by opportunities where frontend engineering plays a strategic role in product quality, platform scalability, and developer velocity. I enjoy solving complex problems, mentoring engineers, and contributing to systems that balance technical rigor with thoughtful user experience.

I would welcome the opportunity to discuss how my background and approach to frontend engineering can contribute to your team. Thank you for your time and consideration.

Sincerely,
Snehashis Ghosh
