

Summary: Lead Software Engineer with 11+ years of experience building scalable, cloud-native web platforms using React, Node.js, and GraphQL. Recently focused on OCR pipelines, Retrieval-Augmented Generation (RAG) systems, and data analysis, enabling intelligent document processing and AI-assisted knowledge retrieval. Proven expertise in microservices architecture, frontend system design, and security-first engineering, with a strong track record of technical leadership and cross-team collaboration.

SKILLS SUMMARY

Operating Systems: Linux (Ubuntu, CentOS), Windows Server, macOS

Languages: JavaScript, TypeScript, Java, Python

Databases: MySQL, PostgreSQL, DynamoDB

Tools : Git, Docker, Jenkins, VS Code, IntelliJ, GitHub Actions, GitLab CI

Hardware : AWS EC2, Azure VMs, Google Compute Engine

Others : Operating Systems: Linux (Ubuntu, CentOS), Windows Server

Virtualization: VMware, VirtualBox, KVM

Containerization & Virtualization: Docker, Kubernetes, VMware, VirtualBox, KVM

Security: SSL/TLS, IAM, firewalls, Prisma Cloud, SonarQube.

Cloud Platforms: AWS, Azure, GCP

Compute: AWS EC2 / Lambda / API Gateway, Azure VMs, Google Compute Engine.

CI/CD & DevOps: Jenkins, GitHub Actions, GitLab CI, CloudFormation, Git

Performance & Testing: K6 (Grafana), load and stress testing

EXPERIENCE

UST Global - Software Engineer Lead II

Feb 2026 – Current

Client: Blue Cross Blue Shield of America , WA, USA

- **Led the Node.js API Gateway platform** in a healthcare (payer) environment, owning architecture, performance, and reliability for the microservices layer fronting member-facing RESTful APIs.
- **Diagnosed and resolved a critical memory bottleneck** in the Node.js gateway caused by an unbounded cache and unreleased heap references, restoring stable memory profiles under sustained load and eliminating recurring degradation in production.
- **Architected the migration from monolithic** per-route auth middleware to a centralized AWS Lambda Authorizer in front of API Gateway — designing exclusion handling for third-party endpoints, a coexistence strategy for services on the legacy path, and policy-caching/revocation tradeoffs across CloudFront, DynamoDB (NoSQL) and SQL-backed member data stores, and Liferay session validation.
- **Drove security review of the auth stack**, identifying an integrity-verification gap in AES-256-CTR token encryption and read-after-write consistency risks in the multi-AZ DynamoDB store, and proposing mitigations.
- Built React, TypeScript, and HTML5/CSS3 interfaces consuming the gateway APIs, aligning frontend contracts with backend service boundaries.
- Delivered supporting services and automation in Java and Python for **token handling, batch orchestration**, and data validation across the platform.
- **Integrated Kafka-based event streaming into the service layer**, publishing and consuming events for asynchronous batch orchestration and downstream data synchronization, decoupling long-running workflows from the request path.
- **Containerized gateway and batch services with Docker and deployed to Kubernetes**, standardizing runtime configuration and scaling behavior across environments.
- **Introduced performance engineering practice using K6 (Grafana)**, establishing load and stress testing to validate throughput and latency before release, with Splunk-based monitoring and observability feeding release gates.

- Built and deployed the **AWS-native CI/CD pipeline for the serverless batch processing platform**, replacing a manual compile → S3 → CloudFormation deployment process.
- Automated **Prisma Cloud security scanning** into both the deployment pipeline and the local development workflow, shifting vulnerability detection left and reducing late-stage remediation.
- Applied AI-assisted development tooling to accelerate code review, refactoring, and documentation of legacy auth and batch flows, building on prior LLM and Retrieval-Augmented Generation (RAG) system work.

UST Global - Software Engineer Lead II

Client: T-Mobile, WA, USA

Sept 2024 – Jan 2026

- Building **T-Mobile's next-generation Internal Developer Portal (IDP)** — a unified control plane that abstracts cloud complexity and gives engineers one-click access to infrastructure, services, and golden-path automation..
- Transformed developer experience into a high-velocity, self-driving platform, enabling teams to ship faster, safer, and with near-zero operational overhead.
 - Saves 20–40% of developers' time spent on repetitive infra/setup work
 - Reduces onboarding time by 30–70%
 - Cuts service creation time from weeks → minutes
- Building **T-Cloud, a private cloud-native computing platform** designed, built, and operated by T-Mobile on OpenShift/Kubernetes, enabling scalable, self-service containerized deployments for development and operations teams.
- Designed, built, and owned a scalable Node.js microservices architecture for a centralized CMS platform, exposing REST and GraphQL APIs and streamlining content ingestion, management, and publishing workflows across multiple internal and external T-Mobile applications.
- **Architected and developed OCR-driven document processing pipelines** in Python, and Node.js to extract, normalize, and validate structured data from unstructured documents, supporting downstream analytics and AI-assisted workflows.
- Implemented Retrieval-Augmented Generation (**RAG**) architectures with LLM integration, combining document ingestion, embeddings, and contextual retrieval layers to enable intelligent search and AI-assisted knowledge access across enterprise content.
- Applied data analysis techniques across SQL and NoSQL stores to evaluate document quality, extraction accuracy, retrieval relevance, and system performance, driving continuous improvements in data reliability and user experience.
- **Led the design and implementation of custom notification microservices** using Node.js, integrated with the **Novu notification platform** and event-driven messaging, consolidating T-Mobile's cloud notification workflows, reducing third-party dependencies, and lowering operational costs.
- **Spearheaded the frontend architecture for T-Cloud** in React and TypeScript, defining engineering standards, reusable component libraries, and HTML5/CSS3 design patterns to ensure consistency, scalability, and long-term maintainability across teams.
- Containerized platform services with Docker and operated them on OpenShift/Kubernetes, with CI/CD delivery through GitLab CI and GitHub Actions and observability via Splunk RUM.
- Provided technical leadership and architectural guidance to frontend and platform engineers in an Agile/Scrum model, aligning system design with cloud-native principles, performance benchmarks, and evolving business requirements.
- Architected and maintained a **high-performance GraphQL service layer** to support flexible, efficient data access for web applications and the broader microservices ecosystem.
- Embedded **security-first engineering practices** across frontend and backend systems, including:
 - Input validation and sanitization to mitigate **Injection and XSS** risks
 - **JWT-based authentication** with short-lived tokens and refresh mechanisms
 - Role-Based Access Control (RBAC) and API gateway enforcement
 - CORS policies, CSRF protection, and strict Content Security Policies (CSP)
- Access Control.

- Enabled **CORS** restrictions, CSRF tokens, and strict **Content Security Policies (CSP)** to prevent Cross-Site Request Forgery (CSRF) and security misconfigurations.

Technologies Used: Node.js, React, GraphQL, Splunk RUM, OCR pipelines, RAG architectures, Data Analysis, Novu, JWT, RBAC, API Gateway, CORS, CSRF, CSP

HPE, CA, USA - Software Engineer Cloud Lead

Dec 2023 – Aug 2024

Roles & Responsibilities:

- Responsible for planning, design, and development of applications through the complete SDLC. Built React components and standalone functions using React Js and FLUX architecture, and utilized React Query to limit redundant API calls.
- Transformed complex functional components, migrated PSDs / Figma UX designs, and created graphical presentations to enhance management efficiency.
- Developed React Js pages, REST controllers, Web services, AJAX calls, and engaged in Agile (Scrum) development.
- Collaborated with offshore and testing teams to ensure high-quality web application delivery. Created modern frontend architecture with React, Redux, and ES2015, managing versioning and dependencies for MicroFrontends.
- Conducted code reviews and wrote custom linting functions for code coverage and code

Technologies Used: Utilized React, React Query, Redux, ES2015, REST APIs, AJAX, Agile (Scrum), Micro Frontends, Figma/PSD, and custom linting tools to design and develop scalable, high-quality web applications through the full SDLC, with strong collaboration and code quality practices.

Fortinet Inc, CA, USA - Staff Software Development Engineer

Jul 2019 - Nov 2023

Roles & Responsibilities:

- Responsible for planning, design, and development of web applications and complete SDLC. Extensive experience with Angular, ReactJS, and FLUX architecture, creating custom reusable components and SPAs.
- Skilled in making API calls, handling asynchronous data, and ensuring responsive design.
- Developed user interfaces with HTML5, CSS3, JavaScript, Material UI, and AJAX.
- Utilized Cypress for end-to-end testing, automated UI tests, and integrated them into the deployment pipeline. Worked with React Router for SPAs, implementing interactive UIs using virtual DOM, JSX, and React Drag & Drop.
- Collaborated with end users and analysts to meet business requirements and maintained uniform CSS styles across applications.

Technologies Used: Angular, React, FLUX architecture, Redux, React Router, JSX, React Drag & Drop, HTML5, CSS3, JavaScript, Material UI, AJAX, Cypress, and Figma/PSD

Equilar Inc, CA, USA - Software Engineer II

Aug 2015 – Aug 2019

Roles & Responsibilities:

- Engaged in Agile (Scrum) development, demonstrating mastery across the full SDLC.
- Developed and tested solutions using HTML5, CSS3, Bootstrap, JavaScript, AngularJs, ReactJS, Redux, and Node.js. Utilized React-Router for SPAs and React-Draggable for drag and drop capabilities. Designed responsive web applications and UIs with React, ensuring cross-browser compatibility and accessibility.
- Implemented state management with Redux and employed Cypress for end-to-end testing.
- Worked with REST APIs, AJAX, and integrated Micro Frontend frameworks like web-pack

Module Federation.

- Managed versioning and dependencies for seamless Micro Frontend integration and collaborated with offshore and testing teams.

Technologies Used: HTML5, CSS3, Bootstrap, JavaScript, AngularJS, ReactJS, Redux, Node.js, React Router, React Draggable, Cypress, REST APIs, AJAX, and web-pack Module Federation

Egen Solutions, IL, USA - Software Engineer

Oct 2014 – Aug 2015

Roles & Responsibilities:

- Proficiently designed and developed web pages using HTML5, CSS3, JavaScript, Bootstrap, AngularJs, ReactJS, Redux, and Node.js. Developed and tested solutions using HTML5, CSS3, Bootstrap, JavaScript, AngularJs, ReactJS, Redux, and Node.js.
- Implemented client-side validation, real-time data binding, and reusable components in AngularJs and ReactJS. Designed responsive web applications and UIs with React, ensuring cross-browser compatibility and accessibility.
- Configured web-pack for build processes, utilized NPM for managing packages, and developed SPAs with AngularJs MVC framework.
- Managed API integrations and server requests with Node.js, Express, and MongoDB. Leveraged AWS services for server less architecture and cloud deployments.
- Created responsive, elegant UIs adhering to W3C standards, and ensured cross-browser compatibility. Developed reusable AngularJs and React components, integrating Redux for state management and real-time applications.

Technologies Used: HTML5, CSS3, Bootstrap, JavaScript, AngularJS, ReactJS, Redux, Node.js, Express, MongoDB, web-pack, NPM, React Router, React Draggable, and AWS

Walt Disney World, FL - Professional Intern

Feb 2014 – Jun 2014

Roles & Responsibilities:

- Developed Global operations and logistics tracking software for Walt Disney merchandising division.

Education Training and Certification.

- Texas A&M University: Masters in Computer Science **2012 -2014**. Graduate Scholarship Recipient
